

AllGal Garages Introduce

The Heritage Range

The range of buildings to enhance the 'Old World' style of yesteryear, but with the innovations of modern technology.

- Constructed from super strong 'C' section galvanised frame, and designed to allow ease of construction common to our entire range of buildings.

- Standard with BHP's Custom Orb cladding (Corrugated) available in both heritage and environmental colours. The durability of COLORBOND® steel, with low maintenance factors ensures your building will look good year after year.

- Design flexibility allows a myriad of window and door locations, allowing you to custom design the building to best fulfil your needs.

- From the basic gable building, available in 6.0 and 7.2 metres wide, skillions may be added to either or both sides. The standard gable eave height of 3.3 metres may be reduced if you require.

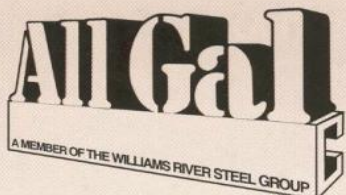

- Skylights, whirlybird ventilators, birdproof vents, and insulation are some of the options that may be considered.

- All buildings are available in either kit form for the handyperson, or alternatively we can arrange our teams of competent tradespeople to complete the project for you.

- All kits come complete from the Engineers certified building plans, hold down bolts and screws to the COLORBOND® gutters and downpipes.

The ultimate purpose of the building is only limited by your imagination. For further expert advice or further information contact the men of steel, AllGal Garages, A Member of The Williams River Steel Group.
